🎯 Objective

The objective of this project is to build a centralized ticketing system that enables customers to purchase tickets online quickly and conveniently, reduces manual workload at physical counters, and prevents overbooking during peak sales periods.

This system supports the organization's strategic goal of digital transformation by expanding online sales channels, improving customer experience, and increasing operational efficiency while ensuring scalability for high-demand events.

📊 Success metrics

Goal	Metric
Reduce ticket purchasing time	Average purchase time ≤ **3 minutes**
Increase online ticket sales	Online sales account for **≥ 60%** of total ticket sales

Improve customer experience	Customer satisfaction score (CSAT) ≥ **4.5/5**
Prevent overbooking	**0 incidents** of duplicate or overbooked tickets
Reduce manual workload	Counter ticket transactions reduced by **50%**
Ensure system reliability	System uptime **≥ 99.9%** during peak periods
Improve payment success rate	Payment success rate **≥ 98%**

🤔 Assumptions

- Customers have stable internet access and basic digital payment capability.
- Events have predefined seating layouts.
- Payment gateways provide real-time payment confirmation.
- QR code scanning devices are available at venue entrances.
- System will initially support web platform.
- Peak traffic can reach up to **10x normal load** during popular event launches.

🌟 Milestones

🗒️ Requirements

Requirement	User Story	Importance	Jira Issue	Notes
Online ticket purchasing	As a **customer**, I want to buy tickets online so that I don't have to queue at the counter	HIGH		Supports web
Seat selection	As a **customer**, I want to select my seat on a seating	HIGH		Real-time

	map so that I can choose my preferred location			seat locking
Prevent double booking	As a **system**, I want to lock seats during checkout so that no two users can buy the same seat	HIGH		Lock timeout: 5 minutes
